## IT Services and Solutions for Growing Business

At **FunctionOne** we believe in providing small and medium-sized businesses with the same level of support large corporations typically enjoy – but at a price **they** can afford!

It is with this goal in mind that I have launched **FunctionOne IT Services**. I've personally been providing IT consulting services to Bay Area businesses for the last **eight** years and a lot has changed in on the IT landscape during that time. Routine maintenance and monitoring of your network infrastructure, as well as taming your growing data storage needs, has gotten harder to manage as more and more of your workforce is out in the field or working from home. Small and medium-sized businesses like your own are in need of affordable access to the same level of support and technologies once previously only the domain of large corporations. And more commonly small businesses are turning to web-based sites and applications as a way to better service their customers and partners.

Our goal at **FunctionOne** is to provide your business with these services, coupled with an IT strategy that will help prepare your company for future growth – all at a price **you** can afford.

### Joe Markert

Founder, FunctionOne

### We want to be Your IT Partner

**The IT Landscape** changes daily. As your IT Partner we can help you navigate the pitfalls in your growth planning and add efficiency to your business processes. By working with you to understand your company needs and how they map with those of your partners, clients and the ever changing IT environment we can help you to empower your business to do more.

**Contact Us: 510.375.7074** today and take advantage of our free network assessment. We'll come onsite, discuss your current IT needs and processes, examine your network and desktop configurations and policies to help you understand how we can make **IT** work for you.
